SUMMARY

Software developer and competitive programmer specializing in cross-platform mobile development with Flutter and full-stack product engineering. Currently building production marketplace apps at a DPIIT-recognized startup, shipping features across payments, real-time data sync, and multi-portal architectures. Strong foundations in C/C++, data structures & algorithms, and systems programming.

EXPERIENCE

Software Developer Intern — BuildBazaarX

Construction & interior-design marketplace (DPIIT-recognized startup) | June 2026 – Present | Remote/Jaipur

- Developed the company's **Flutter mobile app** (github.com/Rishit0612/BuildBazaarX_app) end-to-end as a 1:1 mobile client of the web platform, using **Flutter**, **Riverpod** (state management) and **go_router** (navigation).
- Integrated **Supabase** (PostgreSQL, Auth, Storage, Edge Functions) as the backend, ensuring the mobile app reads/writes the **same database tables as the web portal** for seamless cross-device sync of orders, profiles, and wishlists.
- Implemented the **Razorpay payment flow** in-app, including server-side payment verification via Supabase Edge Functions and transactional order-confirmation emails.
- Currently architecting **3 additional apps** for the company's multi-sided marketplace, including the **Supplier portal app** (github.com/p4bl0-26/builderbazar-Supplier-).
- Collaborated directly with the founding team in a fast iteration cycle: requirement → build → cross-device verification → ship.

PROJECTS

Sortd — College Daily Companion App

github.com/Rishit0612/Sortd | Flutter, Dart, Supabase, Provider

- Built an all-in-one companion app that manages everyday campus tasks, backed by **Supabase** (Auth + PostgreSQL) with **Provider** state management.
- Implemented **timezone-aware scheduled local notifications** for class and deadline reminders, and interactive **fl_chart** visualizations for attendance trends.
- Shipped release-ready builds with adaptive launcher icons, native splash screens, environment-based configuration, and in-app email integration.

BuildBazaarX Supplier App (in development)

github.com/p4bl0-26/builderbazar-Supplier- | Flutter, Supabase

- Designing the seller-side companion app that enables suppliers to manage their marketplace presence and incoming orders.

TECHNICAL SKILLS

Languages: C, C++, Java, Python, Dart, Bash

Mobile: Flutter, Riverpod, go_router, platform integration (payments, deep links)

Backend / DB: Supabase (PostgreSQL, Auth, Storage, Edge Functions), REST APIs, Razorpay

Hardware / Tools: Xilinx Vivado (HDL simulation & synthesis), Git/GitHub, Linux

Core CS: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks

ACHIEVEMENTS

- Solved **196+ problems on Codeforces** (codeforces.com/profile/rishit.612) with a **35-day daily-solving streak**; active rated-contest participant.

EDUCATION

B.Tech, Computer Science & Engineering — The LNM Institute of Information Technology (LNMIIT), Jaipur

2025 – 2029 (expected) | Currently in 3rd semester
