codeforces/rishit.612

EDUCATION

The LNM Institute of Information Technology (LNMIIT) | Jaipur, India

Expected Graduation

- Bachelor of Technology in Computer Science and Engineering.

EXPERIENCE

Software Developer Intern | BuildBazaarX

Recent

[GitHub \(Consumer App\)](#) | [GitHub \(Supplier App\)](#)

- **The Need:** A DPIIT-recognized construction marketplace required a seamless, cross-platform mobile ecosystem for both consumers and B2B suppliers.
- **The Experience & Challenges:** Architecting this dual-ecosystem meant solving fundamentally different engineering problems for B2C vs B2B users.
- **Consumer App Challenges:** The primary hurdle was front-end performance. Optimizing heavy UI assets and large product lists was critical to achieving a buttery-smooth 60fps scrolling experience. Handled complex cart/wishlist state management with **Riverpod** and integrated **Razorpay**.
- **Supplier App Challenges:** The B2B side was a data-heavy beast. The challenge was engineering deep, multi-step product listing workflows with extensive client-side validation, and building interactive financial dashboards synced in real-time via **Supabase**.

PROJECTS

Veritas | Web3, Monad, Next.js, Solidity

Nexora'26

[GitHub](#) | [Live Demo \(Frontend Only\)](#)

- **The Need:** To combat AI-generated fake reality, the internet required an immutable "lie-detector" and decentralized registry for digital truth.
- **The Experience & Challenges:** Executed a grueling 9+ hour hackathon sprint under immense time pressure, successfully combining Web3 immutability with AI perceptual forensics.
- Conquered rigorous technical hurdles including complex Solidity smart contract deployment, Wagmi/viem integration, and severe SSR hydration bugs in Next.js.
- Topped the public Round 1 leaderboard at Nexora'26. Learned the critical reality check that while clean code is essential, pitching effectively under pressure is what ultimately sells the vision.

Sortd | Flutter, Supabase, Provider

Personal Utility

[GitHub](#)

- **The Need:** Students demanded a unified ecosystem to solve the chaotic reality of campus life, spanning scattered class schedules, missed assignment deadlines, and messy shared expenses

- Engineered an advanced two-way data sync via **Supabase** featuring complex conflict resolution to rigorously prevent financial data mismatches between peers.
- Mastered **fl_chart** to parse heavy data points and render highly interactive, smooth financial expense visualizations instantly.

TECHNICAL SKILLS

Languages: C/C++, Dart, Solidity, JavaScript, TypeScript, HTML/CSS.

Frameworks: Flutter, Next.js, Riverpod, Provider, Wagmi/viem.

Tools & Cloud: Supabase, Firebase, Git, GitHub, Foundry, Razorpay.

ACHIEVEMENTS

- **Competitive Programming:** Solved **196+ problems** on Codeforces with a maximum consistent daily streak of 35 days, showcasing strong data structures and algorithms proficiency.
- **Hackathons:** Led the team that topped the Round 1 Public Leaderboard at Nexora'26 among hundreds of participants.
