EDUCATION

The LNM Institute of Information Technology (LNMIIT) | Jaipur, India

Expected Graduation

Bachelor of Technology in Computer Science and Engineering

EXPERIENCE

Software Developer Intern | BuildBazaarX (GitHub Consumer · GitHub Supplier)

June 2026 – Present

- The Need:** A DPIIT-recognized construction marketplace required a unified mobile ecosystem connecting high-volume B2C retail consumers with enterprise B2B building material suppliers.
- The Architectural Split:** Developing two distinct apps meant tackling opposing engineering problems: high-speed visual discovery & conversion (Consumer) vs. complex multi-step data entry & business analytics (Supplier).
- Consumer App (Challenge & Solution):** Heavy image assets and complex product catalogs caused UI thread jank and checkout friction. *Solved by* engineering asynchronous image caching & infinite-scroll pagination for 60fps performance, managing reactive cart/wishlist state with **Riverpod**, and integrating **Razorpay**.
- Supplier App (Challenge & Solution):** Multi-step B2B inventory onboarding and price-variant rules caused data entry errors and desynced analytics. *Solved by* building multi-step form workflows with rigorous client-side validation and real-time interactive KPI dashboards synced securely via **Supabase**.

PROJECTS

Veritas | Web3, Monad, Next.js, Solidity (GitHub · Live Demo)

Nexora'26 Top Leaderboard

- The Need:** To combat AI-generated fake reality, the internet required an immutable "lie-detector" and decentralized registry for digital truth.
- The Experience & Challenges:** Executed a grueling 9+ hour hackathon sprint under immense pressure, combining Web3 immutability with AI perceptual forensics.
- Conquered rigorous technical hurdles including complex Solidity smart contract deployment, Wagmi/viem integration, and severe SSR hydration bugs in Next.js.
- Topped the public Round 1 leaderboard at Nexora'26. Learned the critical reality check that while clean code is essential, pitching effectively under pressure is what ultimately sells the vision.

Sortd | Flutter, Supabase, Provider (GitHub)

Personal Utility

- The Need:** Students demanded a unified ecosystem to solve campus life, spanning scattered class schedules, assignment deadlines, and messy shared expenses (Udhaari).
- The Experience & Challenges:** Engineered a local-first architecture and conquered the critical hurdle of delivering reliable, battery-efficient, timezone-aware background push notifications.
- Engineered an advanced two-way data sync via **Supabase** featuring conflict resolution to rigorously prevent financial data mismatches between peers.
- Mastered **fl_chart** to parse heavy data points and render highly interactive, smooth financial expense visualizations instantly.

TECHNICAL SKILLS

Languages: C/C++, Dart, Solidity, JavaScript, TypeScript, HTML/CSS.

Frameworks: Flutter, Next.js, Riverpod, Provider, Wagmi/viem.

Tools & Cloud: Supabase, Firebase, Git, GitHub, Foundry, Razorpay.

ACHIEVEMENTS

- Competitive Programming:** Solved **196+ problems** on Codeforces with a maximum consistent daily streak of 35 days, focusing on Data Structures and Algorithms proficiency.
- Hackathons:** Led the team that topped the Round 1 Public Leaderboard at Nexora'26 among hundreds of participants.
